

1

Server sends message to the GPS [tracking of some number(s) ON or OFF] following rules or following an action of one Carer having the necessary privileges.

2

If tracking ON, Server receives position of the tracked numbers, following the defined rules. The messages are addressed to members of the Carer groups of the tracked number(s), following defined rules

3

Whether tracking ON or OFF, a Caree can send messages to one or more of his Carer groups [a Carer group consists of one or more Carers]. If tracking is ON, the message will include the position of the Caree. If the tracking is OFF, the message of the Caree will automatically switch on the tracking, to include the position of the Caree in the message.

4

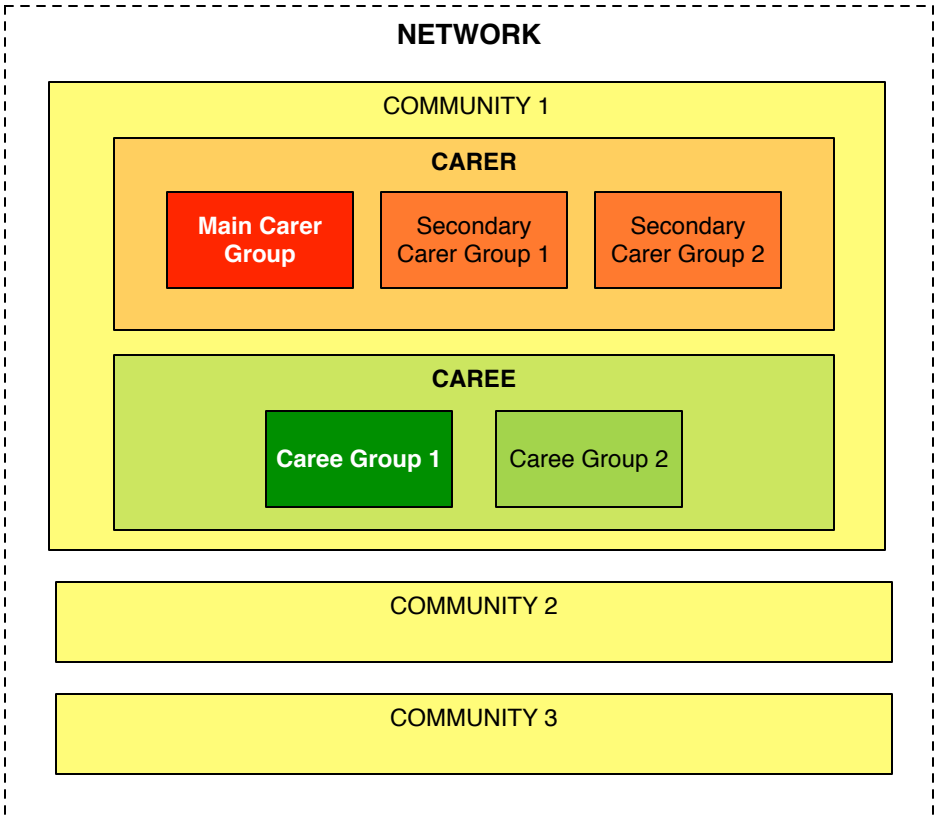

The Server will send the position of the Caree following rules. The Server will forward messages from the Caree to one or more Carers, following rules. The Server will fire events on the Carer's group device(s) [position of the Caree, events detected by the Caree's device], following rules.

5

A Main Carer sets up a Community on the Server and defines rules. A Carer can send messages to a Caree or group of Carees or to a Carer or group of Carers. Messages sent to the server can be forwarded to the intended recipients or fire an event on the device of any of them (alert, automatic call, etc.) Privileged Carer members of the Community can put the tracking of a Caree or group of Carees ON or OFF.

6

Following rules defined by the main Carer, the Server can send messages or fire events on the Caree's or group of Caree's device.

Any group can contain 1 or more members
Members can be qualified (professionals, main or secondary helpers, etc.)
